

## Google Latitude

### About

- **Share Locations-** Location sharing starts only when both you and a friend agree. Invite friends via email or easily add them from your Gmail contacts.
- **Contact Your friends-** Quickly contact your friends with an SMS, IM, or phone call. You can also get directions to lead you to your friends.
- **Control Privacy-** You can share, set, hide your location - or sign out of Google Latitude - from the privacy menu. You can also hide your location or share only a city-level location with certain friends.

### How Does it Work?

To share your location using the Google Latitude iGoogle gadget, you can either set your location manually or have it detected automatically using Gears for your web browser. Gears is a browser plug-in with a Geolocation API that allows Latitude to detect your approximate location using Google's WiFi location database.

---

### What does it cost?

It is free to download  
(Data Package recommend)
